Short-Term and Long-Term Agricultural Planning Prices For North Dakota 2005

Ron Haugen
Farm Management Specialist

Tim Petry
Livestock Economist

George Flaskerud
Crop Marketing Specialist

Dwight Aakre
Farm Management Specialist

Planning for the future can be a very frustrating process, but one that typically pays high dividends. For most farm and ranch managers, developing realistic commodity price expectations is one of the most difficult and complex tasks of the planning process. To ease the burden of forecasting planning prices, the NDSU Extension Service has prepared a summary of projected short- and long-term planning prices.

The estimated short-term planning prices should be used as a guide in setting price expectations for 2005 production. These planning prices can be used for preparing annual enterprise budgets and annual whole-farm cash flow projections.

The short-term planning prices should **NOT** be used for planning capital purchases or expansion alternatives that extend beyond the next production year. Unfortunately, the use of short-term planning prices to make long-term decisions is common. This practice is not recommended because current supply/demand conditions rarely continue for long periods of time and are a poor indicator of future trends.

The long-term planning prices are valuable for evaluating alternative plans that affect the farm or ranch business for more than one year. Both individual yearly price forecasts and long-term average prices are presented.

The long-term planning prices were derived from annual average price forecasts made by the Food and Agricultural Policy Research Institute (FAPRI). The U.S. price estimates reported in the 2004 Baseline Briefing Paper, November 2004 were adjusted, using historical relationships (10-year Olympic average), to reflect North Dakota farm gate prices.

Historical prices are reported for reference. This information can be a valuable reminder of past price fluctuations and trends. Prices for 2004 are averages to date.

The historical crop prices were obtained from “North Dakota Agricultural Statistics 2004,” North Dakota Agricultural Statistics Service publication No. 73. Historical slaughter steer, slaughter hog and milk prices are from FAPRI. The historical steer, cull cow and sheep prices are average prices received at the West Fargo (N.D.) Livestock Exchange.
